1 INTRODUCTION

The Cowal Gold Operations (CGO) is located approximately 38 kilometres (km) north-east of West Wyalong in New South Wales (NSW) (Figure 1). Evolution Mining (Cowal) Pty Limited (Evolution) is the owner and operator of the CGO. Development of the CGO is approved to occur within Mining Lease (ML) 1535 and ML1791.

Development Consent (DA 14/98) for the CGO (including the Bland Creek Palaeochannel Borefield water supply pipeline) was granted by the NSW Minister for Urban Affairs and Planning under Part 4 of the NSW Environmental Planning and Assessment Act, 1979 (EP&A Act) on 26 February 1999. Development Consent (DA 2011/64) for the operation of the Eastern Saline Borefield was granted by the Forbes Shire Council on 20 December 2010.

The NSW Minister for Planning’s delegate granted approval to modify Development Consent (DA 14/98) for the Cowal Gold Operations Processing Rate Modification (herein referred to as the Processing Rate Modification) under Section 75W of the EP&A Act on 4 October 2018.

The Processing Rate Modification generally involves:

- an increase to the CGO’s ore processing rate from 7.5 million tonnes per annum (Mtpa) to 9.8 Mtpa;
- construction of a secondary crusher to increase throughput rates of the CGO processing plant;
- modification/expansion of the existing tailings storage facilities to form the Integrated Waste Landform (IWL) to facilitate storage of tailings over the life of the mine, which also integrates with the existing northern waste rock emplacement;
- relocation of portions of the Up-catchment Diversion System (UCDS) and Internal Catchment Drainage System (ICDS) around the IWL, including relocation of contained water storage D10;
- duplication of the existing water supply pipeline across Lake Cowal; and
- a new mining lease tenement (Mining Lease 1791) north-west of ML 1535 to accommodate infrastructure displaced by the IWL (e.g. soil stockpiles).

The general arrangement of the approved CGO is provided in Figure 2.

A further administrative modification to the Development Consent (DA 14/98) was made on 26 August 2019. A copy of the CGO’s approved Development Consent (DA 14/98) (as modified on 26 August 2019) is available on Evolution’s website (www.evolutionmining.com.au).

1.1 SCOPE OF THIS TMP

Development Consent Condition 7.1(d) requires Evolution to prepare a Transport Management Plan (TMP) for the CGO. The requirements of Development Consent Condition 7.1(d) are outlined in Section 2.1.
This TMP has been prepared with reference to the road transport aspects of the Processing Rate Modification as set out in GTA Consultants (2018) Cowal Gold Operations Modification 14 Road Transport Assessment and relates to the public road system only.

1.2 STRUCTURE OF THIS TMP

The remainder of this TMP is structured as follows:

Section 2: Identifies the requirements of Development Consent Condition 7.1(d) for this TMP and other Development Consent Conditions relevant to this TMP.

Section 3: Outlines the transport routes for CGO-related traffic, including the approved mine access routes, the approved temporary mine access routes, the conditions under which the temporary routes are used, and access routes for construction works.

Section 4: Describes the protocols for undertaking dilapidation surveys to assess the existing condition of local roads associated with CGO-related traffic prior to, and following, any construction-related traffic, and for the repair of local roads that have been damaged by construction-related traffic.

Section 5: Provides details and scheduled timing of the upgrades to the local roads associated with the approved mine access routes.

Section 6: Provides plans for the Pipeline duplication, and Lake Cowal Road realignment works, and details the local roads to be used to access these work sites.

Section 7: Describes the traffic management measures that will be implemented to minimise traffic safety issues and disruption to local road users of the CGO-related transport routes.

Section 8: Describes the CGO’s driver’s code of conduct.

Section 9: Outlines the CGO’s complaints handling procedure.

Section 10: Details the monitoring and reporting program relevant to this TMP.

Section 11: Lists the references cited in this TMP.
### 2 STATUTORY REQUIREMENTS

#### 2.1 DEVELOPMENT CONSENT CONDITIONS

Development Consent Condition 7.1(d) details the requirements for the TMP. Table 1 presents each requirement and outlines where it is addressed in this TMP.

<tr>
<td>Prior to commencing construction of works associated with Modification 14, unless the Secretary agrees otherwise, the Applicant must prepare a Transport Management Plan for the development to the satisfaction of the Secretary.</td>
<td>Section 2.2</td>
</tr>
<tr>
<td>This plan must be prepared in consultation with RMS Forbes, Bland and Lachlan councils and include:</td>
<td></td>
</tr>
<tr>
<td>(i) details of the transport routes to be used for development-related traffic, including roads to be used during construction of the pipeline duplication (as shown in Appendix 7 of the development consent);</td>
<td>Section 3</td>
</tr>
<tr>
<td>(ii) a protocol for undertaking dilapidation surveys to assess the:</td>
<td>Section 4</td>
</tr>
<tr>
<td>• existing condition of local roads along the approved transport routes prior to any development-related construction works; and</td>
<td></td>
</tr>
<tr>
<td>• condition of local roads along these transport routes following any development-related construction works;</td>
<td></td>
</tr>
<tr>
<td>(iii) a protocol for the repair of any local roads identified in the dilapidation surveys to have been damaged during development-related construction works;</td>
<td></td>
</tr>
<tr>
<td>(iv) detailed plans and implementation schedules for the road upgrades specified in Table 9 of the development consent (Schedule 2);</td>
<td>Section 5</td>
</tr>
<tr>
<td>(v) detailed plans of the pipeline duplication and Lake Cowal Road realignment, as these works relate to impacts on local roads;</td>
<td>Section 6</td>
</tr>
<tr>
<td>(vi) details of the measures that would be implemented to minimise traffic safety issues and disruption to local users of the transport routes during construction and operation, including;</td>
<td>Section 7</td>
</tr>
<tr>
<td>• measures to manage development-related traffic, including vehicles associated with the pipeline construction, road realignment and gravel haulage campaigns;</td>
<td>Section 7.1</td>
</tr>
<tr>
<td>• measures to encourage the use of employee shuttle bus service;</td>
<td>Section 7.2</td>
</tr>
<tr>
<td>• temporary traffic controls, including detours and signage;</td>
<td>Section 7.3</td>
</tr>
<tr>
<td>• notifying the local community about development-related traffic impacts;</td>
<td>Section 7.4</td>
</tr>
<tr>
<td>• minimising potential for conflict with school buses and other motorists as far as practicable;</td>
<td>Section 7.5</td>
</tr>
<tr>
<td>• scheduling of haulage vehicle movements to minimise convoy length or platoons;</td>
<td>Section 7.6</td>
</tr>
<tr>
<td>• responding to local climate conditions that may affect road safety such as fog, dust, wet weather;</td>
<td>Section 7.7</td>
</tr>
<tr>
<td>• responding to any emergency repair or maintenance requirements; and</td>
<td>Section 7.8</td>
</tr>
<tr>
<td>• a traffic management system for managing over-dimensional vehicles;</td>
<td>Section 7.9</td>
</tr>
<tr>
<td>(vii) a driver’s code of conduct that addresses;</td>
<td></td>
</tr>
<tr>
<td>• travelling speeds;</td>
<td>Section 8</td>
</tr>
<tr>
<td>• driver fatigue;</td>
<td></td>
</tr>
<tr>
<td>• procedures to ensure that drivers adhere to the designated transport routes; and</td>
<td></td>
</tr>
<tr>
<td>• procedures to ensure that drivers implement safe driving practices;</td>
<td></td>
</tr>
<tr>
<td>(viii) a complaints handling procedure;</td>
<td>Section 9</td>
</tr>
<tr>
<td>(ix) a program to monitor and report on the effectiveness of the implementation of the measures in this plan.</td>
<td>Section 10</td>
</tr>
</tbody>
</table>
In addition to the above, the following Development Consent Conditions are also relevant to this TMP:

- **Condition 7.1(a)** requires that the approved mine access routes are the only routes to be used by CGO employees and contractors travelling to and from the CGO. This condition is addressed in Section 3.

- **Conditions 7.1(b)** requires that the design and construction of the Lake Cowal Road realignment is undertaken in consultation with the Bland Shire Council and in accordance with the *Austroads Guide to Road Design*. This condition addressed in Section 6.

- **Condition 7.1(c)** details the requirements for the local road upgrades associated with the approved CGO. This condition reproduced in full and addressed in Section 5.

### 2.2 REGULATORY CONSULTATION

In accordance with the requirements of Development Consent Condition 7.1(d), this TMP has been prepared in consultation with the NSW Roads and Maritime Service (RMS), Bland Shire Council (BSC), Forbes Shire Council (FSC) and Lachlan Shire Council (LSC).
3 TRANSPORT ROUTES FOR DEVELOPMENT-RELATED TRAFFIC

In accordance with Development Consent Condition 7.1(d)(i), the following sub-sections provide details of the transport routes to be used for development-related traffic, including the approved mine access routes and approved temporary mine access routes (Section 3.1), the roads to be used during construction of the Lake Cowal Road realignment (Section 3.2) and the roads to be used during construction of the duplicated pipeline (Section 3.3).

3.1 MINE ACCESS ROUTES

Development-related operational and construction traffic will use the preferred approved road transport routes described below. The alternative approved routes will only be used under the circumstances described below.

3.1.1 Mine Access Route to/from West Wyalong

All development-related traffic to and from West Wyalong will use the approved mine access route from West Wyalong, which is fully sealed and comprised of the following roads (Figure 3):

- Ungarie Road;
- Wamboyne Road;
- Blow Clear Road;
- Bonehams Lane; and
- the internal mine access road within ML 1535.

3.1.2 Mine Access Routes to/from Condobolin

All development-related traffic to and from Condobolin will use the preferred approved mine access route when it is trafficable. The route is partially unsealed and comprises the following roads (Figure 3):

- The Gipps Way;
- Burcher Road;
- Bena Street;
- Lake Cowal Road (east-west) (unsealed);
- Fitzgerald Road (unsealed);
- Lake Cowal Road (north-south) (unsealed); and
- the internal mine access road within ML 1535.

When the preferred route is untrafficable due to flood conditions, the sealed road approved alternative mine access route from Condobolin will be used by all development-related traffic. The approved sealed mine access route from Condobolin comprises the following roads (Figure 3):

- The Gipps Way;
- Burcher Road;
- Bena Street;
LEGEND

- Mining Lease Boundary (ML 1535)
- Mining Lease Boundary (ML 1791)
- Local Government Area Boundary
- National Park & Nature Reserve
- State Forest
- Railway
- Indicative Mine Water Supply Pipeline Duplication

- Mine Access Route (West Wyalong)
- Preferred Mine Access Route (Condobolin)
- Preferred Mine Access Route (Forbes)
- Mine Access Route (Forbes - Sealed Network)
- Temporary Mine Access Route (Forbes - High Water Level 1)
- Mine Access Route (Condobolin - Sealed Network)
- Temporary Mine Access Route (Forbes - High Water Level 2)
- Road Upgrade Location
- Road Upgrade Description Refer (Table 3 of TMP)

Figure 3
3.1.3 Mine Access Routes to/from Forbes

All development-related traffic to/from Forbes will use the preferred approved mine access route from Forbes when it is trafficable. The preferred approved mine access route is partially unsealed and comprises the following roads (Figure 3):

- Newell Highway;
- West Plains Road;
- Bogies Island Road (partly unsealed);
- Lake Cowal Road (east-west) (unsealed);
- Fitzgerald Road (unsealed);
- Lake Cowal Road (north-south) (unsealed); and
- the internal mine access road within ML 1535.

When the water level is high in Lake Cowal/Nerang Cowal, the preferred mine access route from Forbes via Lake Cowal Road and Bogies Island Road is closed (Figure 3), all development-related traffic to/from Forbes will use the following approved temporary mine access route (Figure 4):

- Newell Highway;
- Lachlan Valley Way;
- Driftway Road;
- Warroo Road;
- Corinella Road (partly unsealed);
- Marsden Road (unsealed);
- Lake Cowal Road (east-west) (unsealed);
- Fitzgerald Road (unsealed);
- Lake Cowal Road (north-south) (unsealed); and
- the internal mine access road within ML 1535.

When neither the preferred mine access route nor the alternative/temporary high-water route from Forbes are trafficable due to wide-spread closure of unsealed roads due to flood conditions, all development-related traffic from Forbes will use either (Figures 3 and 4):

- Newell Highway via West Wyalong and then the approved mine access route from West Wyalong (Section 3.1.1) (an entirely sealed route); or
- Newell Highway to Bodells Lane (unsealed), then Lonergans Lane (unsealed), Blow Clear Road, Bonehams Lane and the internal mine access route within ML 1535.
Figure 4

Source: Geoscience Australia (2006); NSW Department Planning and Environment (2017); Office of Environment and Heritage NSW (2017)
3.2 LAKE COWAL ROAD REALIGNMENT ACCESS ROADS

As described in Section 1.1, the approved development at CGO will include activities within the ML 1791 area, works associated with the realignment of Lake Cowal Road, and works associated with the local road upgrades (Section 5). Vehicular access will use the internal mine access road within ML 1535 to access ML 1791, and also access the Lake Cowal Road realignment works directly from Lake Cowal Road.

Construction vehicles undertaking the Lake Cowal Road realignment works will use the approved mine access routes described in Section 3.1 (Figures 3 and 4).

Construction vehicles for the Lake Cowal Road realignment works will primarily access the worksite directly from Lake Cowal Road (travelling from West Wyalong) and will travel to Lake Cowal Road using the approved mine access routes as described in Section 3.1 (Figures 3 and 4), then to the worksite access off Lake Cowal Road.

3.3 DUPLICATE PIPELINE CONSTRUCTION ACCESS ROADS

Construction vehicles for the pipeline duplication works occurring on the western side of Lake Cowal (i.e. the CGO side of Lake Cowal) will use the approved mine access routes to the CGO described in Section 3.1 (Figures 3 and 4) and the internal mine access road within ML 1535.

Construction vehicles for the pipeline duplication works occurring on the eastern side of Lake Cowal will use Newell Highway from either Forbes or West Wyalong and the following local roads (Figure 5):

- West Plains Road between Newell Highway and Websters Road;
- Wennings Road between Newell Highway and Websters Road;
- Lows Road between Newell Highway and Lake Road;
- Websters Road between West Plains Road and Lake Road; and
- the northern portion (approximately 1.2 km) of Lake Road south of Lows Road.

If as a result of detailed designs for the pipeline duplication, any other roads other than the above are required, this TMP will be revised in consultation with the relevant regulatory agencies (Section 2.2).

4 PROTOCOL FOR DILAPIDATION SURVEYS AND LOCAL ROAD REPAIRS

In accordance with Development Consent Conditions 7.1(d)(ii) and 7.1(d)(iii), this section provides details of:

- the protocol for undertaking dilapidation surveys to assess the existing conditions of local roads along the approved transport routes prior to any development related construction works;
- the protocol to assess the condition of local roads along these transport routes following any development-related construction works; and
- the protocol for the repair of any local roads identified in the dilapidation surveys to have been damaged during development-related construction works.

4.1 PRE-CONSTRUCTION DILAPIDATION SURVEY

Prior to use of the mine access routes from Condobolin and Forbes for construction traffic travelling to the CGO (associated with the Lake Cowal Road realignment and pipeline duplication); Evolution will commission a suitably qualified person to assess the pre-construction condition of the local roads along the approved transport routes anticipated to be traversed by construction traffic associated with the CGO. An indicative/preliminary scope of the dilapidation surveys (relevant to each Council area) is included in Table 2. Note that this dilapidation survey will not preclude regular mine traffic from accessing the site via the approved access routes.

The assessment will include a visual inspection of the pavement/carriageway, travelling in both directions, and locations of damage or deficiency recorded with photographs or video, including GPS coordinates. Geotechnical investigations of the existing pavement/carriageway are not considered necessary at this stage. The results of the survey will be contained within a pre-construction conditions road dilapidation report and will be submitted to the relevant authorities (e.g. Bland, Lachlan and Forbes Shire Council) prior to commencement of the construction.

</tbody>
</table>

4.2 **POST-CONSTRUCTION DILAPIDATION SURVEY**

Within 6 months of completion of the construction works, Evolution will commission a suitably qualified person to assess the condition of local roads in Table 2 that were traversed by construction traffic associated with the CGO. Any routes included in Table 2 that were not used by construction traffic during the construction works will not be included in the post-construction dilapidation survey.

The assessment will include a visual inspection of the pavement/carriageway, travelling in both directions, and locations of damage or deficiency recorded with photographs or video, including GPS coordinates. The results of the survey will be contained within a post-construction road dilapidation report, which will record any observable change in/damage to the pavement/carriageway condition, and will be submitted to the relevant authorities (e.g. Bland, Lachlan and Forbes Shire Council).

4.3 **LOCAL ROAD REPAIRS**

For the locations on the local roads identified in the post-construction dilapidation survey as having been damaged or requiring maintenance, Evolution will repair the area to an equivalent or higher standard than that identified in the pre-construction survey within 6 months of completion of the post-construction dilapidation survey (unless an alternative timeframe is agreed with the relevant Council).

Consent under Section 138 of the NSW Roads Act 1993 is required for any works or activities in a public reserve, public roadway or footpath (nature strip). Section 138 of the NSW Roads Act requires that all activities undertaken within Council’s road reserve be approved by Council prior to the activities being undertaken.
Any damage caused by the CGO construction works will be raised with the relevant Council to seek any required work permit approvals to allow for remediation works to be undertaken. Following completion of the repair work, photos will be taken and placed on record, and Evolution will inform the relevant Council to inspect the works and to provide confirmation of the Council’s satisfaction with the works.

The dilapidation survey will include a consideration of what is considered ‘normal wear’ on the roads, in consideration of location, road type/design, standard and weather conditions. These aspects will be taken into consideration in the event that no when maintenance works are undertaken during the construction period.
5 LOCAL ROAD UPGRADES

In accordance with Development Consent Condition 7.1(d)(iv), this section provides details of the road upgrades and implementation schedule for the local road upgrades specified in Table 9 of Development Consent Condition 7.1(c).

Consent under Section 138 of the NSW Roads Act 1993 is required for any works or activities in a public reserve, public roadway or footpath (nature strip). Section 138 of the NSW Roads Act requires that all activities undertaken within Council’s road reserve be approved by Council prior to the activities being undertaken.

Table 3 identifies the local road upgrades required to be funded by Evolution by Development Consent Condition 7.1(c), and indicates their completion status. All required road upgrades identified in Table 3 have been undertaken in accordance with the relevant Australian Standards and/or Austroads guidelines, and to the satisfaction of the relevant Council.

6 PIPELINE DUPLICATION AND LAKE COWAL ROAD REALIGNMENT PLANS

In accordance with Development Consent Condition 7.1(d)(v), this section provides details in relation to the pipeline duplication and Lake Cowal Road realignment.

Consent under Section 138 of the NSW Roads Act 1993 is required for any works or activities in a public reserve, public roadway or footpath (nature strip). Section 138 of the NSW Roads Act requires that all activities undertaken within Council’s road reserve be approved by Council prior to the activities being undertaken.

6.1 PIPELINE DUPLICATION WORKS

Figure 5 presents the plan showing the extent of the pipeline duplication works at the eastern side of Lake Cowal (i.e. up to Bore 4 of the Bland Creek Palaeochannel Borefield). The pipeline will be constructed within the existing 40 m pipeline corridor.

The pipeline construction will involve burial of the new pipeline (with a nominal diameter of up to 600 millimetres) to a nominal depth of approximately 1 m. Surface disturbance associated with the pipeline construction will be approximately 6 m, with additional disturbance associated with occasional laydown areas.

Given the pipeline traverses Lake Cowal, the construction methodology will be dependent on the water level in the lake. If the lake is dry at the time of construction, the pipeline will be buried as described above. If the lake is fully or partially inundated, the pipeline will be either laid on the lake bed for burial when lake levels recede, or construction will be delayed until lake levels recede.

Construction vehicles for the duplicate pipeline works occurring on the eastern side of Lake Cowal will use the local road routes described in Section 3.3 and shown on Figure 5. Construction vehicles for the duplicate pipeline works occurring on the western side of Lake Cowal (i.e. closest to the CGO) will use the approved mine access routes to the internal mine access road within ML 1535 described in Section 3.1.

6.2 LAKE COWAL ROAD REALIGNMENT

Figure 6 presents the preliminary plan for the realignment of Lake Cowal Road. Realignment of Lake Cowal Road is being undertaken to allow continued public access around the CGO (including ML 1791) and to the relocated travelling stock reserve. Detailed plans of the Lake Cowal Road realignment have been prepared by a third-party contractor as agreed between Evolution and the Bland Shire Council.

The realignment will be designed and constructed in accordance with the Austroads Guide to Road Design and in consultation with Bland Shire Council. For guidance on the design on unsealed roads, Austroads Guide to Road Design refers to the ARRB Unsealed Roads Manual: Guide to Good Practice (2009).

To accommodate the forecast traffic volumes during a gravel haulage campaign to/from Forbes or Condobolin using the preferred mine access routes, the realignment of Lake Cowal Road will be constructed to a minimum standard of a class 4A unsealed road in accordance with ARRB (2009) and to the satisfaction of Bland Shire Council as follows:

- all weather, two-lane and unsealed;
- operating speed standard of 70 km/h to 80 km/h according to terrain type, with appropriate geometric design parameters for the operating speed (superelevation, curve radii, stopping sight distance, vertical grade, crest and sag radii etc); and
• minimum carriageway width 7 m with 1 m wide shoulder on each side.

If it is determined by Evolution and the Bland Shire Council to be economically justifiable to construct the realignment of Lake Cowal Road as a sealed road, a minimum 7.0 m seal will be provided to accommodate the heavy vehicles associated with gravel haulage campaigns along Lake Cowal Road, designed in accordance with the requirements of Austroads (2016) and to the satisfaction of Bland Shire Council.

6.2.1 Corringle Lane Closure/ Reduction

Figure 6 presents the preliminary plan for the realignment of Lake Cowal Road and outlines the small portion of Corringle Lane to be closed due to the Lake Cowal Road Realignment. This road closure/reduction will be done in consultation of the Bland Shire Council.
Proposed Lake Cowal Road Realignment

Portion of Corringle Lane Proposed to be Closed

7 TRAFFIC MANAGEMENT MEASURES

In accordance with Development Consent Condition 7.1(d)(vi), this section details the measures to be implemented to minimise traffic safety issues and disruption to local users of the transport routes during construction and ongoing CGO operations.

7.1 MEASURES TO MANAGE DEVELOPMENT-RELATED TRAFFIC

In accordance with Schedule 7.1(d) of the Development Consent, CGO-related traffic (including the construction phase) is not to use local roads to access the CGO, other than by use of the approved mine access routes outlined in Section 3. Exceptions may be made where use of public roads is necessary in emergency situations to avoid the loss of life, property and/or to prevent environmental harm.

All employees and contractors are subject to the CGO Fitness for Work Policy which includes Drug and Alcohol assessment and management protocols, as well as Evolution’s fatigue management program, Project Arrive Alive. Evolution has implemented a Vehicle Incident Prevention Program, with all Evolution’s light vehicles having a front mounted dash camera installed to provide accurate information of an event for investigation and to encourage positive driver behaviour both on-site and off-site in company vehicles. Tampering with the units may result in disciplinary action by Evolution.

Compliance with the above and related policies forms a condition of all CGO employee and contractor contracts. Further, CGO staff will ensure compliance by communication through various forums such as driver inductions, training and toolbox talks. Notwithstanding, the CGO will rely on the Complaints Register to monitor any unregulated access of public roads by CGO employees or vehicles, and investigations will be undertaken accordingly.

7.2 EMPLOYEE SHUTTLE BUS SERVICE

Private vehicle travel to and from the CGO is undertaken in accordance with Evolution’s Private Vehicle Travel to and from Site Policy and related policies. Under this policy, company-provided transport to and from the CGO is to be used where possible, and private vehicles are not permitted to travel to and from the CGO unless an Essential Driver Authority or temporary exemption is provided by Evolution. Contractors, including those engaged in construction activities, are expected to provide transport for their employees.

The Private Vehicle Travel Policy is linked to the management of fatigue related risks, as part of the Cowal Gold Operations Safety Management System, and considers the total time a worker spends travelling and working. Provision of an Essential Driver Authority for an employee is considered by Department Managers only in certain circumstances based on the employee’s usual place of residence, their travel time from the site and the length of their shift. An “Essential Driver” sticker is provided for display on those vehicles, and non-compliances reported to the Department Manager for follow up. ‘Temporary Driver’ and ‘Shutdown Driver’ authorities may also be provided to employees under the policy, considered by Department Manager or the Processing Manager as relevant.

The number and timing of shuttle bus services between the CGO and West Wyalong, Forbes and Condobolin will be increased to meet demand as required during both the construction activities and ongoing operations. To accommodate the increased work force and assist in managing fatigue, a number of additional buses are anticipated to be provided:

- two additional coaches to and from West Wyalong;
- one additional small bus to and from Forbes; and
- one additional small bus to and from Condobolin.
Each bus used for transporting CGO employees or contractors will be fitted with a sign that uniquely identifies the vehicle and be clearly visible.

7.3 TEMPORARY TRAFFIC CONTROLS

Construction works that will occur within ML 1535 are not anticipated to require any temporary traffic controls or detours outside of ML 1535.

Construction works associated with the realignment of Lake Cowal Road and the local road upgrades (Section 5), will require temporary traffic control on the public road network as the realignment proceeds and is connected to the existing road network, and where the road upgrades occur.

It is anticipated that the road works for the realignment and the road upgrades will not require complete closure of Lake Cowal Road or the relevant local roads, however the need for partial or full road closures or detours will be reviewed when detailed plans of the construction works are available. When detailed plans of the Lake Cowal Road realignment, and the local road upgrades, are available, a Works Zone Traffic Control Plan (or similar) will be prepared by the contractor undertaking the works, which will identify all temporary traffic controls, including any detours and signage associated with the Lake Cowal Road realignment works. This plan will be provided to the Bland Shire Council (and/or other relevant Councils).

Evolution or its contractor will engage the services of a qualified Traffic Controller to provide the required levels of traffic control services.

Evolution or its contractor will ensure personnel responsible for implementing the traffic control measures have performed the relevant level of training and hold the relevant and current qualification during their induction process.

The staging of the construction works associated with the realignment of Lake Cowal Road will be further developed, however, it is generally intended that the works will be constructed in the following stages, noting that the realignment works will not impact access to any privately owned land on Lake Cowal Road, such that staging and construction works need only consider the needs of through traffic travelling along Lake Cowal Road:

- Construct the new carriageway around ML1791, retaining active traffic on the existing alignment of Lake Cowal Road.
- Construct the tie-in carriageways at each end of the realignment, with traffic control to maintain use of the existing Lake Cowal Road alignment by all general traffic.
- Switch traffic to the realigned carriageway, with traffic control to prevent vehicles using the former alignment.
- Remove the former carriageway at each end of the realignment.

7.4 LOCAL COMMUNITY NOTIFICATION

Information regarding the timing and expected implications of construction activity to public roads will be available to the community via:

- local newspaper(s), including the ‘West Wyalong Advocate’, ‘Forbes Advocate’ and the ‘Condobolin Argus’;
- the ‘Cowal Update’ newsletter; and
Information provided to the community will include:

- the anticipated start time and end time of any disruptions to public roads;
- the location of any anticipated disruption to public roads;
- the anticipated length of delays expected by drivers at any specific locations due to disruptions such as detours, stop/slow control locations, single lane restrictions;
- alternative routes available to avoid any road closures or lengthy delays, where relevant; and
- contact details for the Community Complaints Line.

If required as a result of planned extended delays, road closures or detours, portable Variable Message Signs (VMS) may also be used to alert drivers to any changed traffic conditions. Use of portable VMS will be in accordance with RMS or Council policies and protocols as relevant.

All interactions with the community will be guided by Evolution’s Community Relations Policy, External Communication Policy and Media Protocol Policy and Procedure.

7.5 MINIMISING DISRUPTION TO SCHOOL BUSES AND OTHER MOTORISTS

School bus routes are operated by Kelly’s Coaches, with routes to/from Calleen, Lake Cowal and Burcher (Figure 4) using parts of the preferred mine access routes on school days:

**Preferred West Wyalong Route:**
- Ungarie Road between West Wyalong and Wamboyne Road;
- Wamboyne Road between Ungarie Road and Blow Clear Road; and
- Blow Clear Road between Wamboyne Road and Clear Ridge Road.

**Preferred Condobolin Route:**
- Burcher Road between The Gipps Way and Bena Street;
- Bena Street between Burcher Road and Lake Cowal Road;
- Lake Cowal Road between Bena Street and Fitzgerald Road; and
- Fitzgerald Road between Lake Cowal Road (east-west) and Lake Cowal Road (north-south).

**Preferred Forbes Route:**
- Fitzgerald Road between Lake Cowal Road (east-west) and Lake Cowal Road (north-south).

The approved mine transport routes do not traverse any permanent 40 km/h school speed zones. Evolution will consult with Kelly’s Coaches to identify the times during which school buses are typically present on the sections of the mine access routes above, noting that all school buses depart from its depot on Railway Road at West Wyalong, starting morning routes between 6.45 am and 7.30 am, and afternoon routes between 3.00 pm and 3.15 pm. The timing of the school buses generally results in only minor overlap between the school buses being on any part of the routes and the peak periods of traffic generation by the CGO traffic, including CGO shuttle buses.

CGO operating and construction hours are defined by Development Consent Condition 1.2(d), and are as follows:
<table>
<thead>
<tr>
<th>Activity</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Construction of Lake Cowal water supply pipeline (excluding construction at the western side of Lake Cowal)</td>
<td>7am to 6pm Monday to Friday</td>
</tr>
<tr>
<td></td>
<td>8am to 1pm Saturday</td>
</tr>
<tr>
<td></td>
<td>No activities on Sundays or public holidays</td>
</tr>
<tr>
<td>Lake Cowal Road realignment</td>
<td>7am to 6pm, 7 days a week</td>
</tr>
<tr>
<td>Construction of Tailings Storage Facility lifts or rock buttress</td>
<td></td>
</tr>
<tr>
<td>Supplementary IWL activities</td>
<td>24 hours a day, 7 days a week</td>
</tr>
</tbody>
</table>

These hours will minimise the potential for the vehicles transporting the construction workforce to and from the CGO to interact with the school buses.

Evolution’s operational shift times are timed to minimise the exposure of school buses operating on the mine access routes to peak period traffic generated by the CGO. Any change to shift times at the CGO will consider the potential for interaction between school buses and CGO-generated traffic.

The following protocols will be implemented as part of the Driver’s Code of Conduct (Section 8) to minimise the potential for conflict between development-generated traffic and school buses. The protocol will apply to all company-supplied and contractor transport vehicles including employee shuttle buses, gravel transport trucks and other heavy vehicles operating on those parts of the approved mine access routes above and during the times at which school buses are present.

- All drivers must not exceed 40 kilometres per hour in the vicinity of the school bus.

Implementation of the Driver’s Code of Conduct (Section 8) will minimise the potential for disruption to other motorists by development-generated traffic. The Code of Conduct will apply to all company-supplied and contractor transport vehicles including employee transport vehicles, shuttle buses, gravel transport trucks and other heavy vehicles.

### 7.6 Haulage Vehicle Scheduling

When operational (subject to further consultation with Councils and RMS, and detailed design/analysis), haulage of gravel from the CGO would occur on a campaign basis. Gravel haulage would occur between 7.00 am and 6.00 pm up to seven days per week. Loaded trucks would not leave the CGO before 7.00 am or after 6.00 pm. Empty trucks may enter the CGO before 7.00 am.

Departures of loaded gravel haulage trucks would be staggered by a period of 2 minutes where possible, as managed by the CGO security at the front gate. Drivers of returning empty gravel haulage trucks would not travel in a convoy of three or more trucks.

To the extent possible, haulage vehicles would be scheduled to occur outside of the peak periods associated with the general movement of vehicles to and from the CGO (i.e. CGO shift changes periods, at 6am, 7am, 5pm and 6pm).

Consideration will be given to how heavy vehicle deliveries will be managed within the construction site. Consideration would include adequate provisions for standing heavy vehicles within site, provisions for heavy vehicles to enter and leave without the need for reversing (where possible) and assess anything that may be relevant to ensuring the safety of workers and the general public with minimal disruption to traffic.
7.7 RESPONDING TO LOCAL CLIMATE CONDITIONS

The Driver’s Code of Conduct (Section 8) includes instructions regarding driver behaviour when local climate conditions are poor due to wet weather, fog or dust.

When local conditions alter the approved mine access route to be used to/from West Wyalong, Condobolin or Forbes, this will be communicated by email notifications to all employees and contractors and/or daily shift commencement notifications (e.g. notifications at pre-starts).

7.8 EMERGENCY REPAIR OR MAINTENANCE REQUIREMENTS

Drivers of company-supplied or contractors transport are required to complete a Driver’s Incident Report form detailing any hazards encountered while engaged on Evolution transport tasks, including hazards on the approved mine access routes which arise from damage to or deterioration of the road network. Any hazard identified which requires emergency repair or maintenance on the public roads will be raised to the relevant Council to be rectified.

7.9 TRAFFIC MANAGEMENT FOR OVER-DIMENSIONAL VEHICLES

All oversize loads will be transported with the relevant permits and load declarations obtained in accordance with Additional Access Conditions for oversize and overmass heavy vehicles and loads (RMS, 2017) (or its current equivalent at the time of the event) and any other licences and escorts as required by regulatory authorities. The relevant permits and travel conditions will be negotiated with RMS and relevant local councils on a case-by-case basis.
8 DRIVER’S CODE OF CONDUCT

All drivers of light and/or heavy vehicles that are either employees or contractors approved under the Private Vehicle Travel to and From Site Policy or have been engaged by Evolution for transport movements associated with construction and the ongoing operational phase of the CGO must adhere to the following Code of Conduct for Drivers while travelling on the public road network:

- obey all New South Wales road rules, laws and regulations that apply to the operation of vehicles on public and private roads, including use of mobile phones;
- manage fatigue where necessary via resting at the end of long shifts before driving long distances and taking regular breaks every 2 hours;
- do not exceed the speed limit, including when overtaking another vehicle;
- do not overtake in awkward or inappropriate situations, where vision is limited, in the vicinity of intersections, or where centreline markings prohibit overtaking;
- respect the rights of others, including drivers and pedestrians, to use and share the road space;
- maintain a safe following distance between vehicles (minimum three-second gap, greater in poor weather or other conditions);
- keep the vehicle clean and in good mechanical condition to reduce environmental impacts, and ensure the vehicle has working and effective headlights, tail lights, brake lights, reversing lights and indicators;
- follow only the approved mine access routes as described in Section 3 when travelling to and from the CGO or off-site construction areas (Sections 3.2 and 3.3) (exceptions may be made in emergency situations to avoid loss of life or property and/or to prevent environmental harm);
- not exceed 40 kilometres per hour in the vicinity of the school bus;
- turn off flashing/rotating beacons when on public roads, with the exception of vehicles used for road works;
- drive to the conditions, slow down and allow extra distance to the vehicle in front in wet weather or when visibility is reduced due to fog, rain or dust;
- use headlights on low beam to help visibility for other road users in overcast and wet conditions; and
- only enter and exit public roads in a forward direction.

In addition, drivers of heavy vehicles (greater than 4.5 t GVM) must:

- complete Evolution’s induction process;
- comply with all road regulations regarding driving hours and fatigue management;
- ensure that loads are properly secured and no loose items can dislodge from trays;
- ensure any loads which overhang by more than 1.25 m are clearly marked by a red flag;
- stagger departures from the CGO by 2 minutes;
- not travel in a convoy of three or more heavy vehicles; and
• display a high level of courtesy to other motorists at all times, such as pulling over to the side of
  the road (if safe to do so) to let any built-up traffic pass and allowing sufficient space for vehicles
  to pass where required (i.e. keeping left and not straddling centre lines).

• Drivers of company-supplied or contractors transport are required to complete a Driver’s Incident Report
  form detailing any hazards, incidents or near misses encountered while engaged on Evolution transport
  tasks. Any incident that occurs on the approved mine access routes that does not result in an official
  complaint but involves a development-related vehicle is to be brought to the attention of relevant
  personnel at the CGO as soon as is practical.

The Code of Conduct for Drivers as indicated above forms part of the employee contract and transport
contractual arrangements entered into by Evolution. Evolution will carry out necessary measures to
inform transport contractors of the Code of Conduct, and will conduct audits for compliance to the Code
of Conduct. This may be via various information forums such as driver inductions, training and toolbox
talks.
9 COMPLAINTS HANDLING PROCEDURE

A process for the handling of complaints is outlined below in accordance with the requirements of the CGO’s EPL and Development Consent conditions and to facilitate prompt and comprehensive responses to any community concerns.

As required by EPL Condition M6.1, a dedicated Community Complaints Line has been established (via phone [02] 6975 3454 or email community.cowal@evolutionmining.com.au) that is available 24 hours, seven days a week for community members who have enquiries or who wish to lodge complaints in relation to Evolution’s activities at the CGO. The Community Complaints Line allows community members to enquire or lodge complaints about CGO-related vehicles travelling on the public road system.

A complaints register will be maintained by the CGO Sustainability Manager (or delegate) in accordance with EPL Condition M5 and a summary will be made available on Evolution’s website in accordance with Development Consent Condition 9.4(a)(v). The summary of the complaints register published on Evolution’s website will be updated on a monthly basis. A person making a complaint must be prepared to give their name and a contact phone number or email address, to allow Evolution to advise of the outcome of any investigation. The complainant's name and contact information will not be published on Evolution’s website.

An initial response will be provided to the complainant within 24 hours using the contact details provided (phone and/or email). Preliminary investigations into each complaint will commence within 48 hours of complaint receipt. Complainants will be advised as soon as possible of the result of the investigation.

Information recorded in the complaints register with respect to each complaint related to road transport will include:

- date of complaint;
- the method by which the complaint was made;
- nature of the complaint, including date, time and place of the event and if possible, any identifying feature of the vehicle involved;
- response action taken to date (if no action was taken, the reasons why no action was taken);
- date and method of response to the complainant.

The investigation will seek to determine what occurred at the time of the incident, the root cause of the incident, any contributing factors which led to the incident, and whether appropriate controls were implemented to prevent the incident. Corrective and/or preventative actions will be assigned to relevant responsibilities as a result of the investigation. Actions will be communicated through planning meetings and toolbox talks. If required, the Driver’s Code of Conduct (Section 8) will be amended and all drivers required to review the amended code. Outstanding actions will be monitored for their effectiveness upon completion.

A summary of complaints will be provided in the CGO’s Annual Review, and will be reported at meetings with the Community Environmental Monitoring and Consultative Committee (CEMCC).
10 MONITORING, REPORTING AND REVIEW PROGRAM

Annual Review

In accordance with Condition 9.1(b) of the Development Consent, Evolution will prepare an Annual Review to report on the environmental performance of the CGO by the end of July each year, or other timing as may be agreed by the Secretary of the DPIE.

The Annual Review will report on the following aspects relevant to this TMP:

- status of dilapidation surveys and local road repairs described in Section 4;
- status of local road upgrades described in Section 5;
- status of the pipeline duplication works and Lake Cowal Road realignment works described in Section 6; and
- any transport related complaints.

The Annual Review will be made publicly available on Evolution’s website (www.evolutionmining.com.au) in accordance with Development Consent Condition 9.4(a)(vii). The Annual Review will also address the Annual Environmental Management Report requirements of ML 1535 Condition of Authority 26.

Non-Compliance Notification and Reporting

A non-compliance is defined within the Development Consent as:

An occurrence, set of circumstances, or development which is a breach of the development Consent but is not an incident.

In accordance with Development Consent Condition 9.5(b), Evolution will notify the DPIE in writing to compliance@planning.nsw.gov.au within seven working days after becoming aware of any non-compliance with the Development Consent Conditions. Evolution will provide in writing to the DPIE a detailed report of the non-compliance which identifies, the development application number for the CGO, the Development Consent Condition of which the CGO is non-compliant, the way in which the CGO does not comply and the reason for the non-compliance. The CGO will also provide details around any actions which have been or will be taken to address the non-compliance.

Incident Notification and Reporting

An incident is defined in the CGO Development Consent as:

A set of circumstances that causes or threatens to cause material harm to the environment, and/or breaches or exceeds the limits or performance measures/criteria in this Consent.

In accordance with Development Consent Condition 9.3(a) Evolution will notify the DPIE in writing to compliance@planning.nsw.gov.au, and any other relevant agencies immediately after becoming aware of any incident related to the CGO. Evolution will provide the DPIE and any other relevant agencies with a detailed report on the incident, and any further reports that may be requested.
Review of this TMP

This TMP will be made available on Evolution’s website in accordance with Development Consent Condition 9.4(a). In accordance with Development Consent Condition 9.1(c) this TMP will be reviewed under the timing schedule set out in that Development Consent Condition and revised if required. In accordance with Development Consent Condition 9.2(a), the adequacy and effectiveness of this TMP will be audited and measures or actions to improve performance will be recommended as required.

External Audits

Independent Environmental Audit

An Independent Environmental Audit will be conducted in accordance with Development Consent Condition 9.2(a) and may include transport related issues. This condition is reproduced below:

9.2 Independent Auditing and Review

(a) Independent Environmental Audit

(i) By the end of July 2016, and every 3 years thereafter, unless the Secretary directs otherwise, the Applicant shall commission and pay the full cost of an Independent Environmental Audit of the development. This audit must:

- Be conducted by a suitably qualified, experienced and independent team of experts whose appointment has been endorsed by the Secretary;
- Include consultation with relevant regulatory agencies, BSC and CEMCC;
- Assess the environmental performance of the development and assess whether it is complying with the requirements in this consent and any other relevant approvals (such as environment protection licences and/or mining lease (including any assessment, plan or program required under this consent);
- Review the adequacy of any approved strategy, plan or program required under this consent or the abovementioned approvals; and
- Recommend measures or actions to improve the environmental performance of the development, and/or strategy, plan or program required under this consent.

Note: This audit team must be led by a suitably qualified auditor, and include ecology and rehabilitation experts, and any other fields specified by the Secretary.

(ii) Within 3 months of commissioning this audit, or as otherwise agreed by the Secretary, the Applicant shall submit a copy of the audit report to the Secretary, together with its response to any recommendations contained in the audit report, and a timetable for the implementation of these recommendations as required. The applicant must implement these recommendations, to the satisfaction of the Secretary.
11 STAKEHOLDER CONSULTATION

Community Environmental Monitoring and Consultative Committee

A CEMCC has been established for the CGO in accordance with Development Consent Condition 9.1(d). This condition is reproduced below:

9.1 Environmental Management

(d) Community Environmental Monitoring and Consultative Committee

(i) The Applicant shall establish and operate a Community Environmental Monitoring and Consultative Committee (CEMCC) for the development to the satisfaction of the Secretary. This CEMCC must:

- be comprised of an independent chair and at least 2 representatives of the Applicant, 1 representative of BSC, 1 representative of the Lake Cowal Environmental Trust (but not a Trust representative of the Applicant), 4 community representatives (including one member of the Lake Cowal Landholders Association);
- be operated in general accordance with the Guidelines for Establishing and Operating Community Consultative Committees for Mining Projects (Department of Planning, 2007, or its latest version);
- monitor compliance with conditions of this consent and other matters relevant to the operation of the mine during the term of the consent.

Note: The CEMCC is an advisory committee. The Department and other relevant agencies are responsible for ensuring that the Applicant complies with this consent.

(ii) The Applicant shall establish a trust fund to be managed by the Chair of the CEMCC to facilitate the functioning of the CEMCC, and pay $2000 per annum to the fund for the duration of gold processing operations. The annual payment shall be indexed according to the Consumer Price Index (CPI) at the time of payment. The first payment shall be made by the date of the first Committee meeting. The Applicant shall also contribute to the Trust Fund reasonable funds for payment of the independent Chairperson, to the satisfaction of the Secretary.

As required by Development Consent Condition 9.1(d)(i), the CEMCC comprises an independent chair, one representative of each of the BSC, Forbes Shire Council and Lachlan Shire Council, a representative of the Wiradjuri Condobolin Corporation, a representative of the Lake Cowal Foundation, two Evolution representatives and four community representatives including one from the Lake Cowal Landholders Association.

The CEMCC will continue to provide opportunities for members of the community to attend CEMCC meetings to discuss specific issues relevant to them (including transport related issues). This will be achieved by landholders making a request to the CEMCC regarding a particular issue, or by the landowner registering a complaint in the complaints register. Landowners who register complaints will be invited to join in discussion of the issue at the next CEMCC meeting.

Items of discussion at these meetings will include (but not be limited to) mine progress and development activities, environmental monitoring reporting, complaints, and any environmental assessments undertaken.

CEMCC meetings are held quarterly, and CEMCC meeting minutes are provided on Evolution’s website (www.evolutionmining.com.au), as required by Development Consent Condition 9.4(a)(vi).
12 REFERENCES

All references to Evolution’s policies and procedures refer to the version of each policy which is current at the time of the event.
